

BPT Quarterly Report
Financial Quarter 3: 01 October 2019 to 31 December 2019

The report below shows BPT achievement rates for all Trusts in England in the **3rd Quarter** of the **2019-20** financial year.

To ascertain compliance, NELA cases recorded within this quarter and locked within the published timeframe were included. Providers and Commissioners should monitor case ascertainment to ensure that cases recorded and locked in the NELA system reflect adequately the Trust activity. Commissioners may decide not to pay the enhanced BPT if the number of cases recorded in the NELA system is deemed inadequate.

The NELA Online Dashboard holds Quality Improvement graphs on individual performance in metrics that Trusts may wish to consult for a better understanding of BPT performance at Hospital level.

Trust code	Trust name	Total of locked cases recorded within quarter	Average Estimated case ascertainment	Number of patients High risk pre & post-op	Number of patients with Consultants presence in theatre & direct CCU admission	BPT metric	BPT (>= 80%)
REM	Aintree University Hospitals NHS Foundation Trust (1)	50	94.0%	30	27	90.0%	Met

About the NELA BPT metric

Trusts may qualify for the BPT, if 80% of their NELA high risk patients had a Consultant Surgeon and a Consultant Anaesthetist present during surgery and were admitted directly to critical care. The same patient needs to have received both elements of care.

To determine the BPT achievement rates, the following definitions of numerator and denominator have been considered:

Denominator - Includes all locked cases within the quarter based on the date of surgery (variable: *S04ArrivalInTheatreDatetime*), with a high risk mortality. Excludes patients who died in theatre (*S06Proc_Dest* = 4) or were palliated (*S06PostOpEndOfLifePathway* = 1). High risk patients, in the context of the BPT, are defined by a predicted hospital mortality $\geq 5\%$ pre and post-operative. The predicted mortality will be based on either the NELA or Clinical Judgement scores. Where the risk score differs between these methods, the highest predicted risk category will be used. If insufficient data is available to calculate the NELA score, the patient will be considered high risk.

The field which captures the method of risk assessment was subject to change in December 2019. To find whether clinical judgement was applied see *S03PreOpRiskOfDeathMethodJudgement* = 1.

Numerator - The number of cases for which a Consultant Surgeon and a Consultant Anaesthetist were present in the theatre and with a direct a CCU admission.

The variables required to calculate the numerator are: *S04Anaes_Grade* (with "Consultant" selected), *S04Surg_Grade* (with "Consultant" selected), & *S06Proc_Dest* (where level 2 HDU or level 3 ICU are selected)

Estimated Case ascertainment - The estimated case ascertainment is based on the estimated caseload (derived HES data) from procedures performed between December 2017 and November 2018 by the Hospital(s) under the same Trust.

Please read below concerning changes to the NELA database (DECEMBER 2019)

Please note that the changes to the NELA database introduced in December 2019 (collection Year 7) resulted in changes to how we ascertain the method of risk assessment, for all admissions with a date on or after December 2019. This is now recorded in the following field: *S03PreOpRiskOfDeathMethodJudgement*

Contacts

NELA FAQs on the BPT can be found [here](#). Please contact the **NELA team** for any questions about the audit or data collection.
